Introduction

This document is a guide to the Na Hale O Makena document repository. It lists every folder and subfolder in the repository, explains what each is for, and lists the documents each folder contains with a short description of each.

The repository is published at: <https://sutor-ai.github.io/nhom-github/>

How to use it. Each folder and subfolder heading below carries a clickable “Open folder” link that opens that folder in the repository, where you will always find the current version of every file listed. File names are shown here without version dates, so this guide does not need to be reissued each time a document is revised — open the folder link to get the latest file.

The repository root also contains a README overview page.
