

Vehicle-Gate & Building-Entry Access Systems

Market Research for an Established South-Maui Condominium Development

Prepared for:	Molly	Date:	June 11, 2026
Property:	NHOM — 6 buildings, 3 vehicle gates, south side of Maui	Version:	v2026-06-11A
Prepared by:	Robert E. Sutor, VPApps LLC	Status:	For board discussion / vendor outreach

1. Purpose & Scope

NHOM is evaluating a modern access-control system covering **three vehicle entry/exit gates** and **main door entry at six buildings**. The goal is a state-of-the-art, internet-connected system that can be managed from a desktop browser or web/mobile app, logs and tracks resident, guest, and vendor access at both the gates and the building doors, and — ideally — runs as **one integrated system** rather than two disconnected ones. The development is on the south side of Maui, so genuine local installation and ongoing support is a firm requirement.

This report separates two layers that are often confused: the **technology platform** (the software/hardware ecosystem that determines how advanced and how integrated the system is) and the **local company** (who actually installs and supports it on Maui). The right outcome usually combines a strong platform with a capable local integrator.

2. How to Read This Report

Gate automation and **building entry control** are treated as two distinct capabilities, because most firms are stronger at one than the other. A separate **integration** measure asks whether the gates and building doors can be run as a single, unified system — and through which provider. Because LPR is only one feature, the assessments below weigh the **full feature set**, the degree of **AI capability**, and **how digitally advanced** each option is — not LPR alone.

All capability ratings reflect each firm's **publicly stated positioning** as of the date above. They are starting points for vendor conversations, not audited findings — the combined gate-plus-building experience in particular should be confirmed with project references during interviews.

3. Glossary of Terms

Term	Definition
LPR / ALPR	License Plate Recognition (also Automatic License Plate Recognition). Cameras read a vehicle's plate and match it to an approved list to open a gate automatically — no fob or code.
Access control	The overall system that decides who may enter which door or gate, when, and that logs every event.
Gate automation	The powered hardware that physically opens/closes a vehicle gate (slide, swing, or barrier-arm operators) plus the controls that trigger it.
Building entry control	Door-level entry at each building — typically a video intercom and/or reader that verifies residents and lets visitors/vendors be admitted.
Video intercom	A door station with camera and two-way audio so residents can see and speak with a visitor and unlock remotely from a phone or browser.
Integration / unified platform	One software platform that manages both the gates and the building doors together, with a single login, shared user list, and one combined activity log.
Cloud / web platform	Management software hosted online, reachable from a desktop browser or mobile app, with no on-site server to maintain.
AI analytics	On-device or cloud artificial-intelligence features — e.g., vehicle/person detection, plate reading, unusual-activity alerts, and natural-language video search.

Term	Definition
Mobile / NFC credential	Using a smartphone (or encrypted tap card) as the 'key' instead of a physical fob.
RFID	Radio-frequency tag/sticker (e.g., a windshield tag) read wirelessly to grant vehicle access.
Visitor / vendor management	Tools to issue time-limited guest or delivery passes and keep a tracked record of every vendor entry at gates and doors.
PoE	Power over Ethernet — one network cable delivers both data and power to a device, simplifying install.
ONVIF	An open industry standard that lets cameras and access devices from different brands work together.

4. Technology Platforms — the Integration & AI Layer

Whether the gates and buildings can run as one system, and how AI-advanced the result is, is decided mostly here — by the platform. Four cloud ecosystems can unify vehicle gates and building doors on a single web/app-managed platform. A local company would install and support the chosen platform (and, for the physical gate operators, often pair with a gate specialist).

Platform (typical local installer)	Gate automation control	Building entry control	Native gate+building integration	AI / digital sophistication
Verkada — Command (Unified Security Partners, HI)	Yes — LPR-unlock + door controllers	Yes — intercom + readers	Strong — one cloud platform	High — edge-AI analytics, LPR, alerts
Avigilon Alta (Motorola) (via Avigilon partner locator)	Yes — LPR credentials	Yes — video intercom readers	Strong — one cloud platform	High — Alta/Unity AI analytics
Brivo Security Suite (confirm HI installer)	Partial — LPR via Eagle Eye	Yes — multifamily core	Strong — access + video + visitor	High — Eeva AI agent, wallet keys
ButterflyMX (confirm HI installer)	Partial — readers/tags; LPR newer	Yes — multifamily video intercom	Strong — within its ecosystem	Moderate — proptech app UX

Takeaway: Verkada and Avigilon Alta are the most complete for a single, AI-rich system spanning gates and doors. Brivo is excellent for multi-building/multi-site management; ButterflyMX is the most resident-friendly but lighter on heavy gate LPR and AI analytics.

5. Local Maui Companies — Capability Matrix

Ratings: **Core** = central specialty | **Yes** = offered, solid | **Partial** = offered, not a focus | **Limited / —** = minimal or none.

Gate–Building integration is the key column for NHOM: it rates each firm's likely ability to deliver the gates and the six building doors as one combined system.

Company	Town	Gate automation	Building entry control	Gate–Building integration	AI / digital level	Cloud (web+app)	Maui support
Unified Security Partners	Honolulu	Via partner	Core	Strong (platform)	High	Yes	Statewide
Access Hardware Inc.	Kahului	Core	Core	Strong	Moderate	Yes (opt.)	Local
Centra Systems Hawaii	Wailuku	Core	Limited	Gate side	Basic	Partial	Local
Alert Alarm Hawaii	Kahului / HNL	Partial	Yes	Moderate	Moderate	Yes	Local
Security Tech	Kihei	—	Partial	Limited	Moderate	Yes	Local
eDesign Group (e-Design)	Kihei	—	Partial	Limited	Moderate	Partial	Local
ITS Hawaii	Waipahu (Oahu)	Limited	Yes	Limited	Moderate	Yes	Oahu

6. Local Company Directory

Company	Town	Telephone	Website
Unified Security Partners	Honolulu (serves Kihei/Wailuku)	(808) 419-7122	unifiedsecurity.partners
Centra Systems Hawaii	Wailuku	(808) 877-4709	centrasystemshawaii.com
Access Hardware Inc.	Kahului	(808) 871-4200	accesshardware.net
Alert Alarm Hawaii	Kahului (Maui) / Honolulu HQ	(808) 871-7967 · (808) 521-5000	alertalarmhawaii.com
Security Tech	Kihei	(808) 874-0550	securitytechhawaii.com
eDesign Group (e-Design)	Kihei	(808) 495-4344	edesignhawaii.com
ITS Hawaii	Waipahu, Oahu (statewide)	via website	itshawaii.com

7. Company Profiles — Perceived Strengths & Weaknesses

Each profile flags, on the strength side, whether the firm shows **meaningful experience delivering gates and building entry as one combined system** — the single most important question for NHOM. “Perceived” means drawn from public information; verify with references.

Unified Security Partners

Honolulu (services Kihei & Wailuku) • (808) 419-7122 · unifiedsecurity.partners

Combined gate + building experience: Strong at the software/integration level (one platform spans gates and doors), but the combined experience is via Verkada’s design rather than in-house vehicle-gate construction.

Perceived strengths

- Verkada Gold Authorized Partner since 2019 — deploys the most digitally advanced, AI-rich platform in this report.
- The Verkada Command platform **natively unifies building door access/intercom and vehicle-gate control** (LPR-unlock + door controllers) in one cloud portal, managed from web or mobile — the cleanest path to a true single system.
- Strong AI/analytics: vehicle and person detection, plate reading, and proactive alerts across every entry point.

Perceived weaknesses

- Honolulu-based with no Maui office — on-island response time is the key thing to verify.
- Single-vendor (Verkada) shop — the answer is Verkada or nothing.
- Physical gate-operator fabrication/heavy gate hardware is not their trade; they would likely subcontract a gate specialist (e.g., Centra) for the actual gate motors and barriers.

Access Hardware Inc.

Kahului (Maui office) + Honolulu • (808) 871-4200 · accesshardware.net

Combined gate + building experience: **Best-positioned local firm** to deliver gates and the six building doors as one project under one contractor — confirm depth with references.

Perceived strengths

- Of the local firms, the clearest track record of doing **both** sides as integrated commercial systems — publicly offers commercial card access control, parking/gate controls, entry communication (intercom), and cameras together.
- Maui office operating for decades (since the 1980s); commercial and government-facility focus and scale.
- Licensed low-voltage contractor (fiber, structured cabling) — can own the wiring backbone for both gates and six buildings; cloud-management options available.

Perceived weaknesses

- More traditional/hardware-centric integrator; cloud and AI features are “available options” rather than the core of the brand — less obviously cutting-edge than a Verkada- or Brivo-native shop.
- Specific cloud/AI platform certifications and LPR experience are not clear from public materials — confirm which platforms they deploy.
- Confirm specific combined multi-gate + multi-building reference projects.

Centra Systems Hawaii

Wailuku • (808) 877-4709 · centrasystemshawaii.com

Combined gate + building experience: **Owns the gate side**; ideal as the gate-operator partner paired with a platform/building integrator rather than a sole provider of the whole system.

Perceived strengths

- Maui's largest and most established **gate-automation specialist** (30+ years) — the experts for the physical vehicle-gate side: fabrication, operators, and gate access control.
- In-house licensed electricians; one-stop for new gate builds, repair, and maintenance plans.
- Local, Maui-based, fast response.

Perceived weaknesses

- Gate-centric — building-door intercom, multi-building access control, and AI/cloud analytics are not their core competency.
 - Not a unified-AI-platform provider; would most likely partner for the building-entry and software layer.
 - Their “combined system” experience is weighted heavily to the gate side.
-

Alert Alarm Hawaii

Kahului (Maui office) / Honolulu HQ • (808) 871-7967 Maui • (808) 521-5000 HQ • alertalarmhawaii.com

Combined gate + building experience: Moderate — capable across access and video with a strong service footprint, but combined large-scale gate+building integration should be verified.

Perceived strengths

- Largest security provider in the state (since 1962) with the only UL-listed monitoring center in the islands and 150+ staff — the deepest local service and monitoring bench, with a Maui office.
- Installs cloud-based access control with mobile, encrypted NFC, and Bluetooth credentials, integrated with video on a single browser-based platform.
- Strong choice where long-term service reliability and 24/7 monitoring matter most.

Perceived weaknesses

- Breadth and service depth over bleeding-edge AI; gate automation is offered, not a core specialty.
- Evidence of large combined multi-gate + multi-building integrated deployments is not strongly public — confirm references.
- Not tied to a single most-advanced platform; AI sophistication depends on the product line chosen.

Security Tech

Kihei • (808) 874-0550 • securitytechhawaii.com

Combined gate + building experience: Limited — good local service partner, but not demonstrated on combined community-scale gate+building systems.

Perceived strengths

- South-Maui local (Kihei/Wailea), family-owned, A+ BBB rating, strong service reputation.
- Modern, app-managed smart security: cameras, access control, and 24/7 in-house monitoring.

Perceived weaknesses

- Oriented to cameras/alarms and smaller-scale or residential access rather than community-scale vehicle-gate automation.
 - Multi-building building-entry at scale and combined gate+building integration are not evidenced publicly.
 - AI/digital depth is modest relative to the enterprise platforms.
-

eDesign Group (e-Design)

Kihei • (808) 495-4344 • edesignhawaii.com

Combined gate + building experience: Limited / unverified — a “confirm scope” candidate; strongest as the local install/cabling partner alongside a platform specialist.

Perceived strengths

- Strong south-Maui presence (same street as NHOM’s Destination Maui contacts) with Wailea/Makena property references.
- Excellent low-voltage/network backbone and integration/automation craftsmanship; HTA design partner.
- Could own the cabling/network layer and the building-side AV and security.

Perceived weaknesses

- Residential smart-home / AV-first; no public evidence of community-scale gate LPR or commercial multi-building access control.
- Combined commercial gate+building integration experience is unverified.
- Enterprise AI analytics are not a focus.

ITS Hawaii (Integrated Technology Solutions)

Waipahu, Oahu (statewide service) • via itshawaii.com • itshawaii.com

Combined gate + building experience: Limited on the neighbor island — capable integrator, but Maui logistics and combined-system references must be confirmed.

Perceived strengths

- Strong low-voltage/structured-cabling and system-integration competence (licensed electronics contractor).
- Installs cloud-based access control (biometric, Bluetooth, mobile) integrated with cameras and alarms; markets AI automation/analytics.

Perceived weaknesses

- Oahu-based — on-island Maui response time is the key question.
- Combined multi-gate + multi-building integrated track record is not publicly evidenced.
- Gate automation is not a core specialty.

8. Key Takeaways & Recommendation

A truly **integrated, AI-capable, cloud-managed** system across three gates and six buildings is best achieved by choosing a unified platform and a local company to install and support it. Among the options researched, two paths stand out:

- **Path A — Most advanced unified platform:** Verkada via **Unified Security Partners**, paired with **Centra Systems Hawaii** for the physical gate operators. Highest AI/digital sophistication and the cleanest single-platform integration; verify Maui response times and gate-hardware coordination.
- **Path B — Strongest single local integrator:** **Access Hardware Inc.** as one Maui-based contractor for both gates and building entry; verify which cloud/AI platform they deploy and request combined-deployment references.

Recommendation: Solicit competing proposals on both paths — (A) Unified Security Partners (Verkada) + Centra, and (B) Access Hardware — and include Alert Alarm Hawaii as a third bid for its local service depth. Make **combined gate-plus-building experience** and **single-platform management** explicit scoring criteria, alongside AI capability and Maui support.

9. Questions to Ask Each Vendor

- Can you manage all three gates and all six building doors from **one platform** with a single user list and one activity log? Demonstrate it.
- Show two or more **reference installations** where you delivered vehicle gates and building entry as one combined system — ideally HOA/condo scale.
- What **AI features** are included (vehicle/person detection, plate reading, anomaly alerts, video search) and are they on-device or cloud?
- Are the three gates already automated, or is **gate-operator hardware** in scope? If you don't fabricate gates, who is your gate partner?
- How is **vendor/visitor access** issued and tracked across both gates and doors (time-limited passes, logs, photos)?
- What is your **Maui response time** for service calls, and where are your technicians based?
- What are the **one-time** and **recurring** (license/monitoring) costs per gate and per door?

10. Version History

Version	Date	Author	Description
v2026-06-11A	06/11/2026	RES	Initial Maui market-research report for Molly / NHOM board: platforms, local-company matrix (gate automation vs. building entry, integration, AI), directory, and strengths/weaknesses profiles.
