

Resident Manager's Report

July 23, 2026

Good morning, everyone.

June had very low occupancy, and July has continued to be very quiet in terms of residents and activity around the property. Despite the slower season, we've continued making progress on maintenance projects and planning for future improvements.

The pool and spa continue to be operating well. We did experience an unexpected increase in chlorine usage and chemical costs after fertilizer that had been applied around the pool was blown into the water during windy conditions. That increased the chlorine demand, but the water chemistry has since stabilized and everything is back to normal.

Regarding the cooling towers, both towers remain fully functional and continue to provide cooling to all of the condominiums. One of the towers has developed a seam leak. As a temporary measure, we've installed a small, inexpensive pump that returns water back into the tower to minimize water loss while we evaluate the best long-term repair. We have received a proposal for the repair and are currently reviewing our options.

I've also been meeting with contractors and obtaining competitive bids for several upcoming maintenance projects. These include refinishing the pavilion doors, including the bathroom and fitness center doors, as well as stucco repairs around the property. I'll continue gathering proposals so the Board has options to consider before work is scheduled.

We're also evaluating a new gate and building entry system designed to make property access more convenient for residents while significantly enhancing security. I expect to have additional information and recommendations for the Board within the next few weeks.

We've also been testing a robotic mower on the property. So far, it's done an excellent job and is significantly quieter than traditional mowing equipment, which has been a benefit for residents. It also allows the landscaping crew to spend more time on other landscaping maintenance throughout the property.

We've had a few deer intrusions onto the property recently. In response, the fence near Building D was repaired, and that appears to have helped reduce the problem.

Overall, the property continues to be in good condition, and we're making steady progress on both

routine maintenance and planning for future repairs and improvements.
